Digital Wallet Documentation

Overview

Digital Wallet is now live in SDOs, bringing consumption insights for products like Data 360 and Agentforce right into your demo orgs!

With Digital Wallet, organizations can get consumption insights and usage trends for products like Data 360, Agentforce, and more. Before now, Digital Wallet was only available in active customer orgs.

This Solution Kit deploys Digital Wallet in your SDO where you can now view out of the box reports and dashboard that show consumption by tag, agent, and resource.

This enables partners to test out Digital Wallet functionality as well as showcase these capabilities in demos and customer conversations.

Things to Note

- The traditional **consumption card** experience will not be available
- You can view Digital Wallet data in out of the box Reports, Dashboards as well as the underlying Data 360 DLO (Data Lake Objects)
- You can also build your own custom reports on top of the underlying DLOs
- Data will be refreshed once per day (However you can manually refresh the TenantBillingUsageEvent Data Stream for faster updates)
- This Solution Kit is only available in new SDOs (that have previously not enabled Data 360)

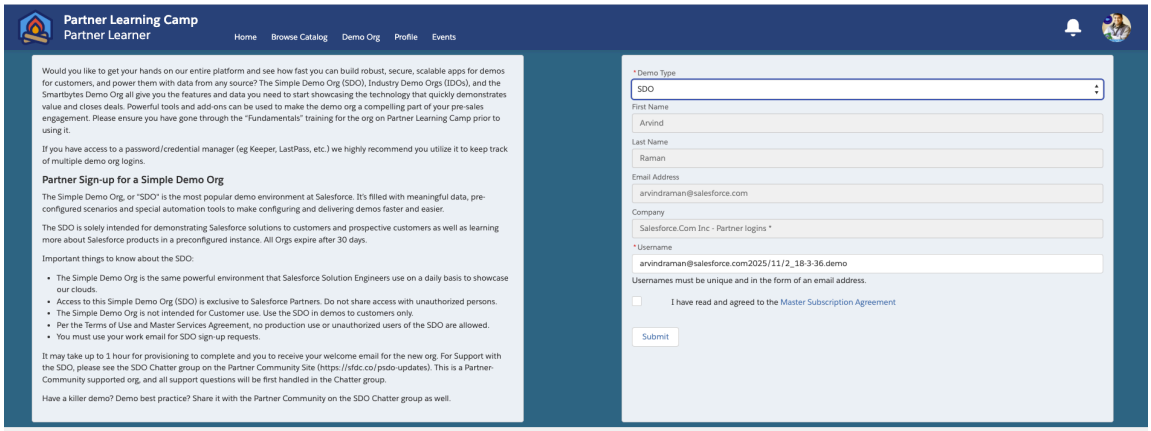
What does this Solution Kit deploy?

This Solution Kit deploys Digital Wallet in your SDO Org where you can enable Digital Wallet after Data 360 setup. This enables you to view usage details of the usage generated in the org for Agentforce and Data 360. You will be able to view your usage information through the out of the box report that details usage by tag, where you can see information like consumption per agent, per usage type, and per Data 360 resource

Digital Wallet in SDO - Setup Guide

This Solution Kit is only available in NEW SDOs that have not previously enabled Data Cloud

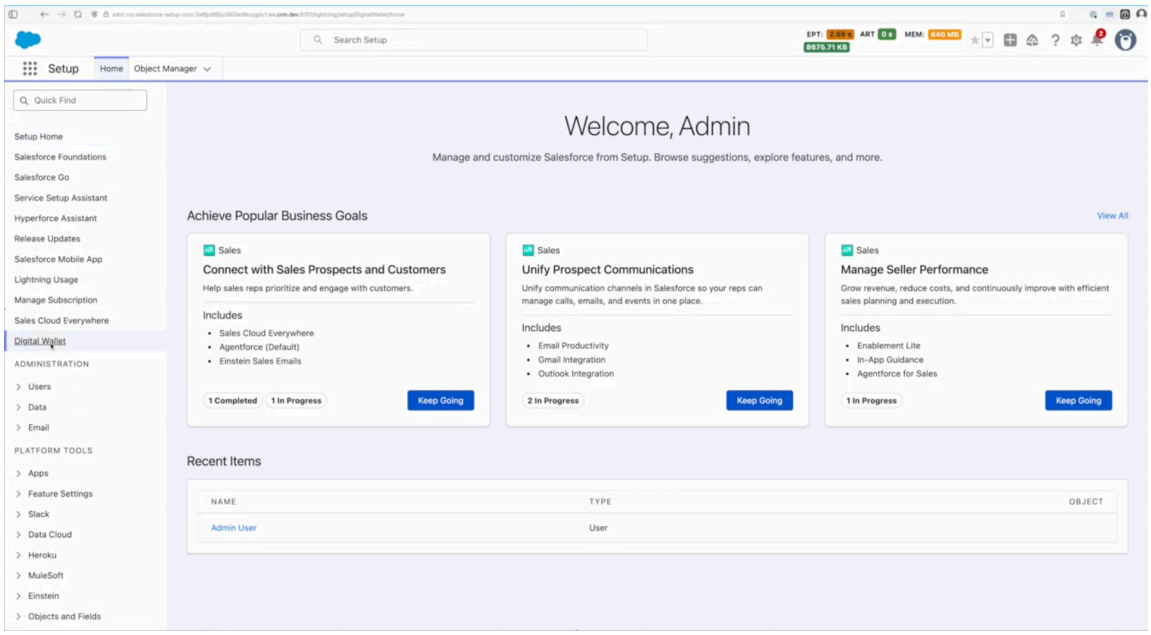
- Get a new SDO by going to Demo Org with Partner Learning Camp at https://partnerlearningcamp.salesforce.com/s/demo-org



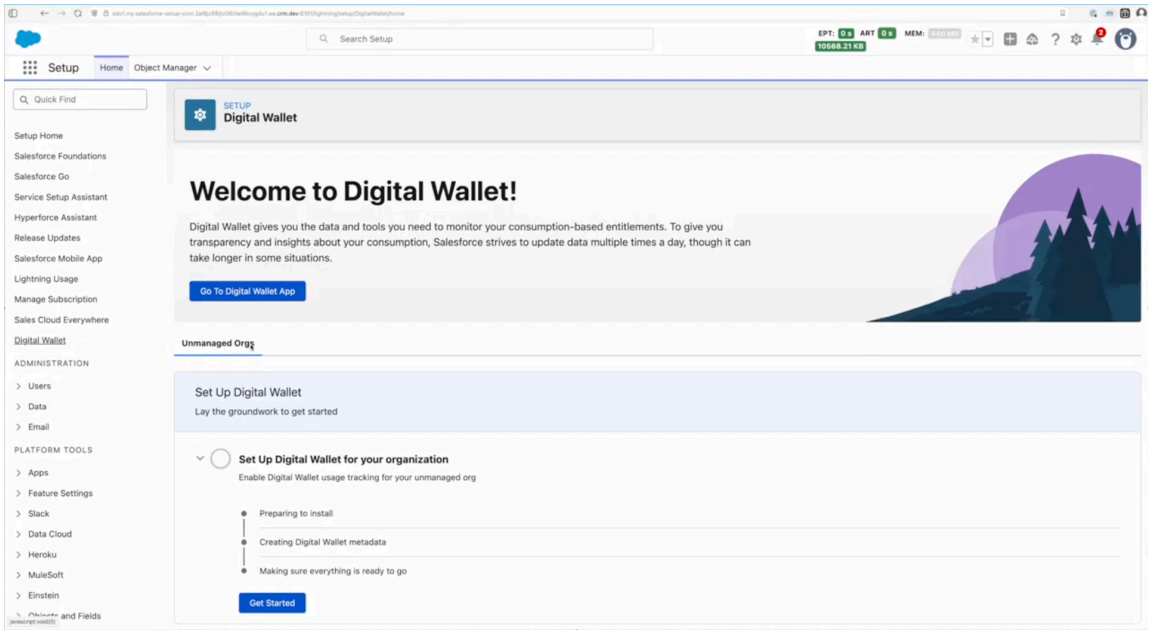
- Request a new SDO by filling out the form
    - It may take 1-2 hours to get your org credential

- Setup Data 360 by going to Setup -> Data Cloud Setup

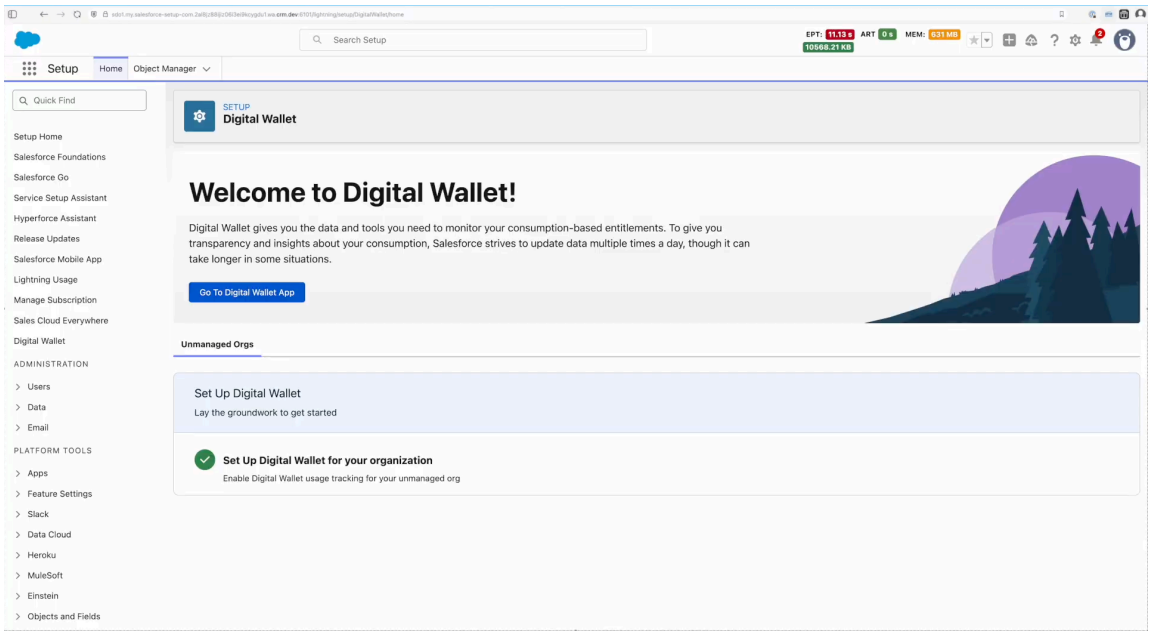
- Go to Setup > Digital Wallet



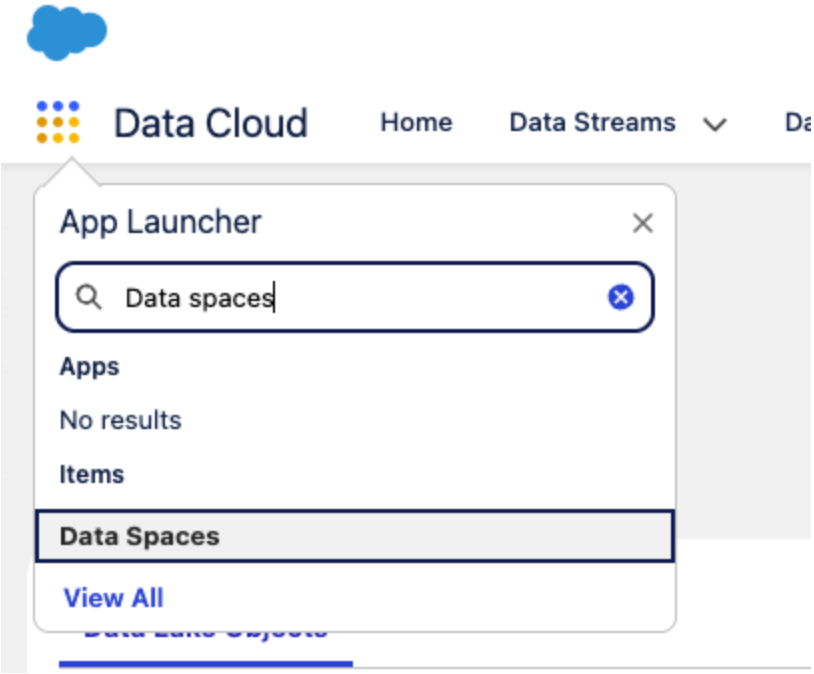
- Select “Get Started” to begin the Digital Wallet installation process. Once complete Digital Wallet will start to track events in your org



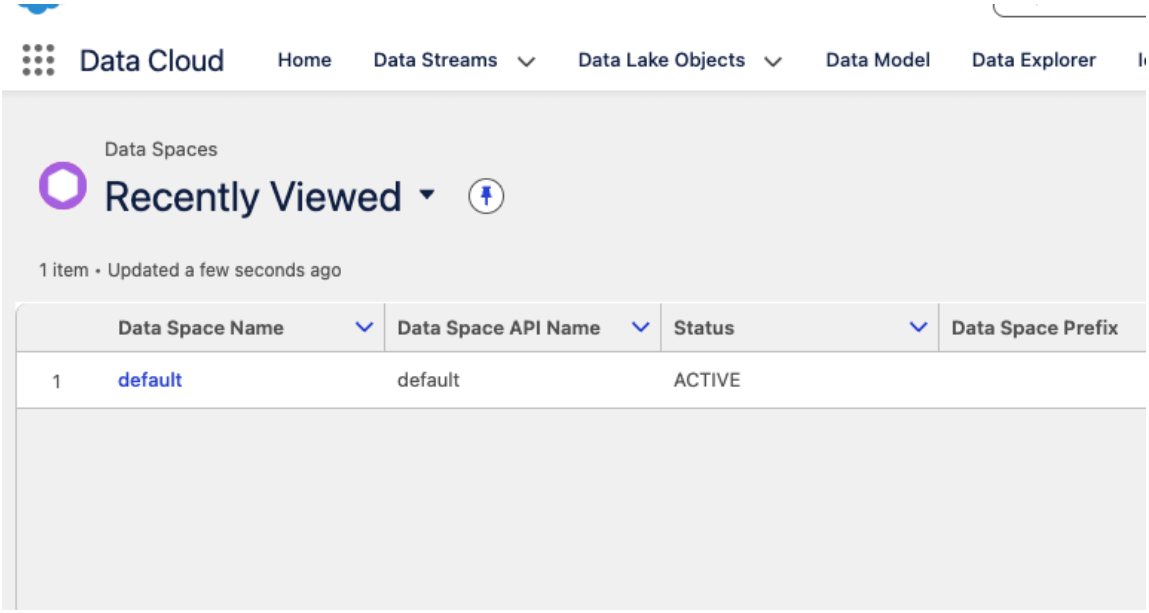
- Once the installation is complete, you will see this confirmation message:



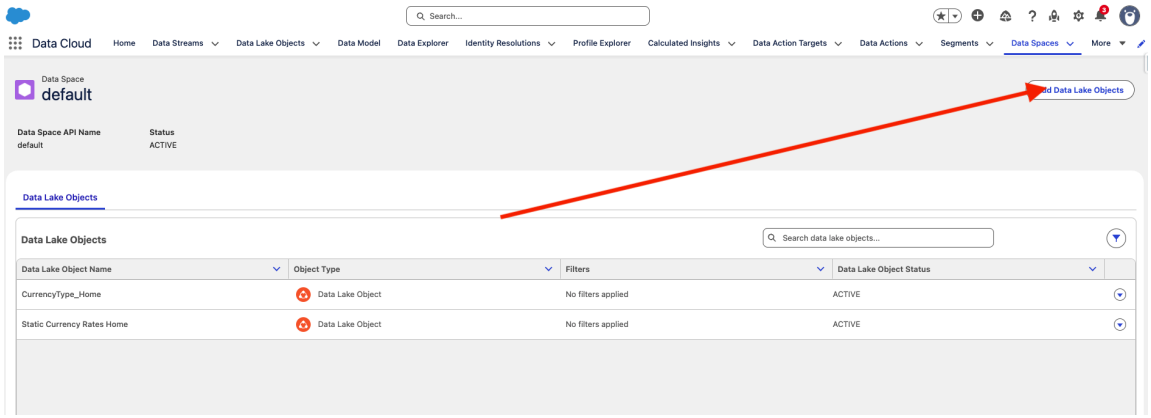
- From the App Menu go to Data Cloud -> ‘Data Spaces’



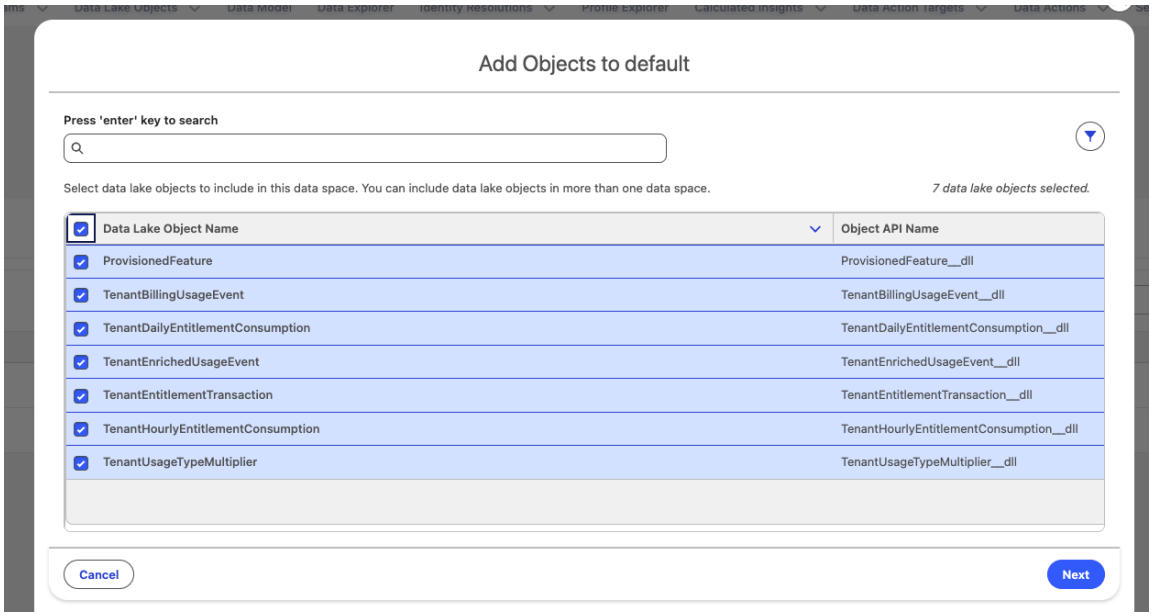
- Select your default Data Space



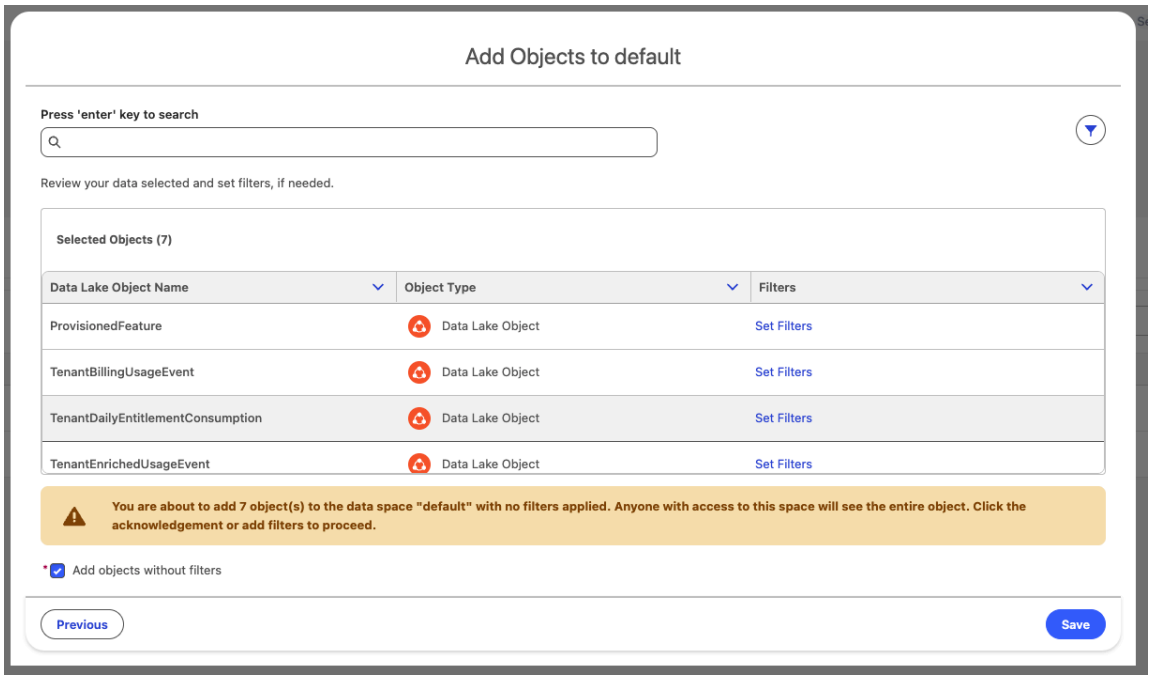
- Click "Add Data Lake Objects"



- Select all objects, then Next



- Select “Add objects without filters” and Save



- Digital Wallet is now enabled in your SDO and will be populated with data (available in Reports, Dashboards) as you use consumption based assets in your org

- The Usage Guide showcases how to see Digital Wallet data in Reports, Dashboards and DLO (Data Lake Objects)
    - The Digital Wallet Sync process happens every 12 hours. If you need this sync to happen faster, you can manually refresh the TenantBillingUsageEvent Data Stream for more frequent updates.

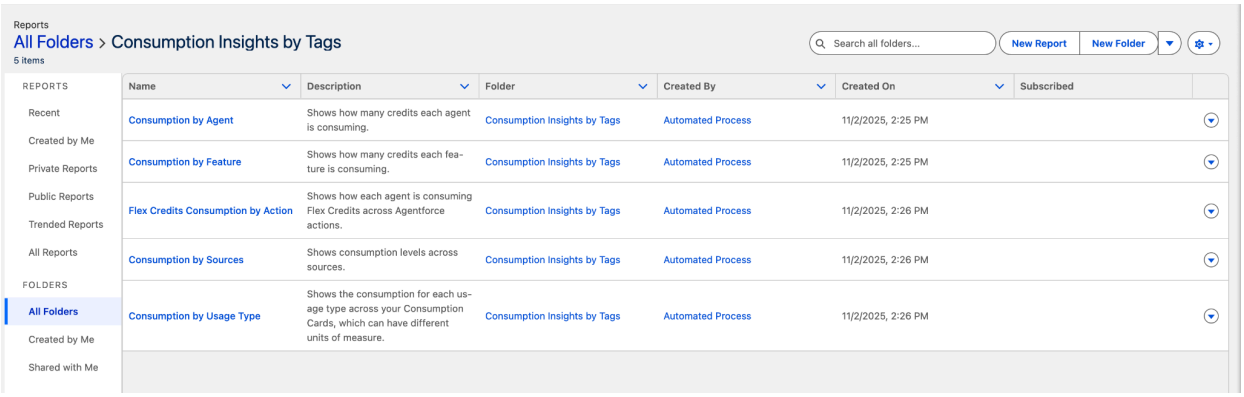
Digital Wallet in SDO - Usage Guide

Now that you have Digital Wallet, you can view generated usage events in a few different ways

- Reports
- Dashboards
- DLO (Data Lake Objects)

Reports

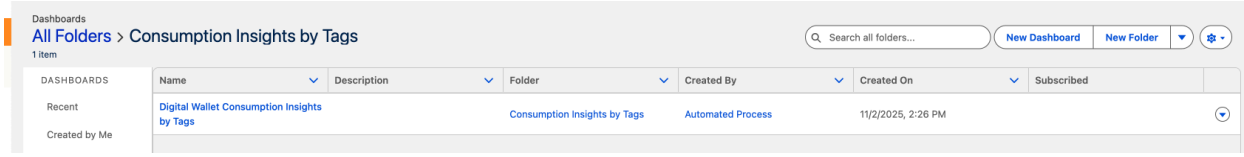
You can find the Digital Wallet Reports in the ‘Consumption Insights by Tags’ folder



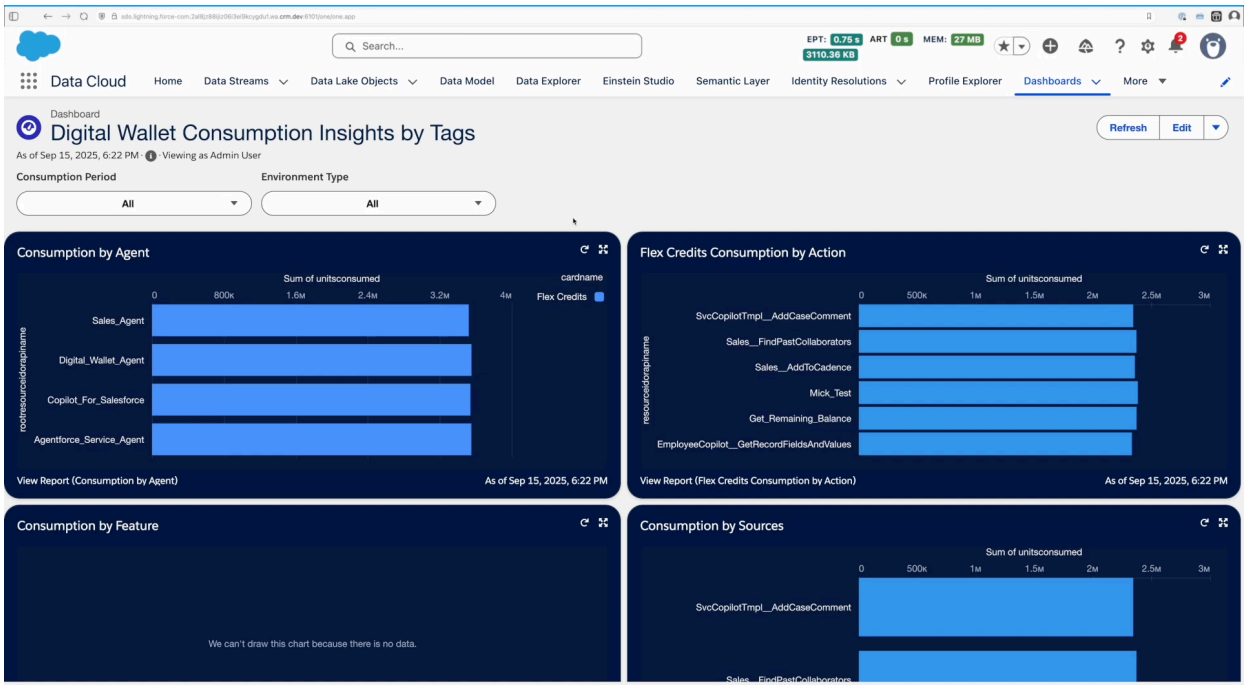
Dashboards

You can also view the out of the box dashboard for a detailed consumption breakdown by available tags.

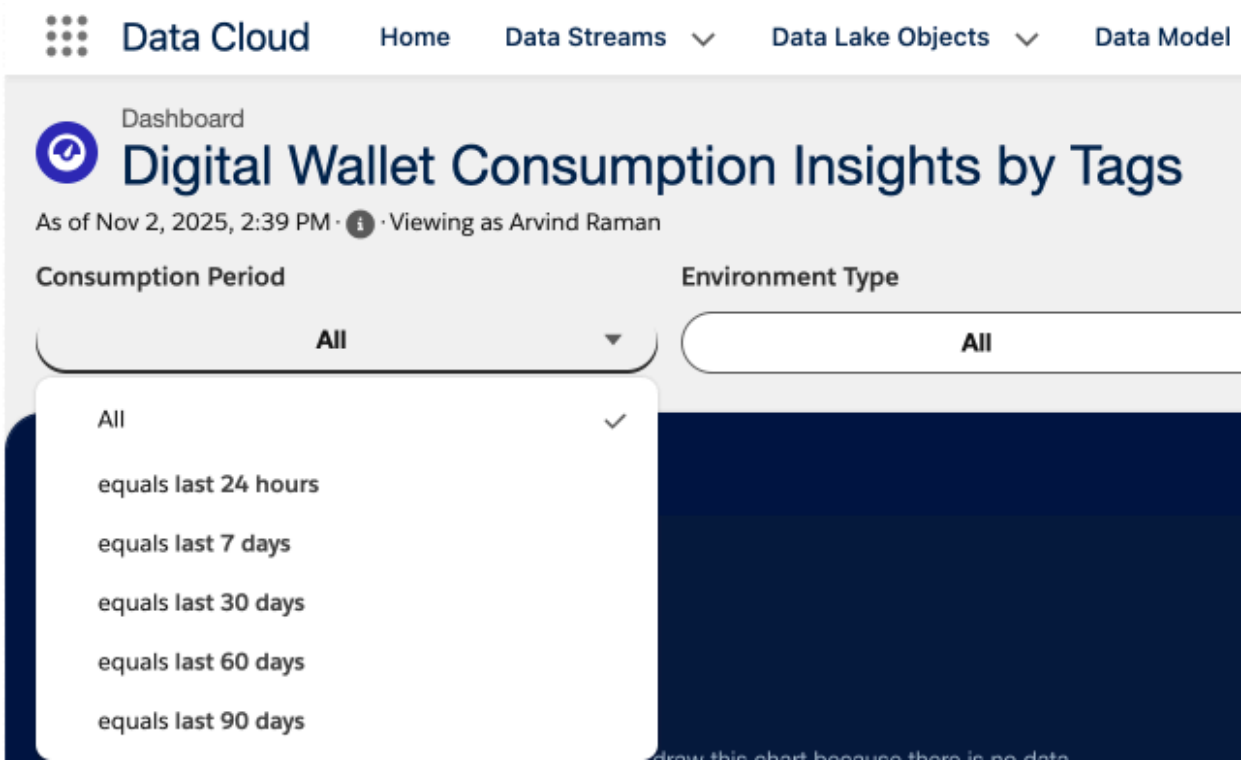
- To view the dashboard, go to the folder ‘**Consumption Insights by Tags**’



- Then, select the Dashboard named “**Digital Wallet Consumption Insights by Tags**”



- You change the dashboard filters to get specific time periods



DLO (Data Lake Objects)

You can view the TenantEnrichedUsageEvent DLO directly in Data Explorer

- This DLO provides you with the raw usage information that powers Digital Wallet.
- The TenantEnrichedUsageEvent Data Lake Object (DLO) fields contain the consumption tags that provide the dimensions you need to slice and dice consumption data based on agents, action, features, and environments. This DLO fuels the data provided in the Digital Wallet out-the-box-reports and dashboards, as well as enables you to build your own custom reports.
